Global Leader of Consumer and Industrial Imaging to Present Case Study on TECSYS' Advanced WMS Solutions at the 2009 Supply Chain Summit

MONTREAL, November 18, 2009 - TECSYS Inc. (TSX: TCS), an industry-leading supply chain management software company announced today that the Director of Logistics of one of its major customers, a global leader of consumer and industrial imaging products, will be presenting their case study entitled: *"Standardizing a Single Advanced WMS Application Across Business Units and Facilities Sizes"* at the 2009 Supply Chain Summit, taking place at the Hyatt Regency DFW in Dallas, Texas on December 4th (day two of the conference) at 11:00 a.m.

Synopsis of the presentation:

"Historically large organizations have been unable to gain real supply chain benefits from implementing a single "best-of-breed" Warehouse Management System across all of their small to large distribution center locations due to the high cost and complexity of advanced solutions. Divergent business divisions with differing business needs further complicated requirements beyond the capabilities of a single WMS solution. Today, this global leader of imaging products is overcoming this roadblock following a corporate directive to standardize operations across all divisions, all size facilities with a state-of-the-art, real-time WMS application. In this session you will hear what roadblocks existed in the past and how this company overcame them to provide a standardized solution that fits their entire business for today and the future." For further details, please follow this link: [2009 Supply Chain Summit](#)

Robert Colosino, Vice President of Marketing and Business Development at TECSYS stated: ***"Supply chains are not in a perfect world—often comprised of a mix of operations of various sizes and complexities that seriously challenge the robustness and scalability of many supply chain execution solutions today. From the outset, TECSYS has architected its supply chain software to address the challenges facing operations' management; providing them with a much higher level of efficiency, scalability and simplicity to address their distribution needs without compromises."***

TECSYS' participation at the Summit will also include the announcement of major new releases of its warehouse management and transportation management software that can be seen at the TECSYS booth.

About TECSYS' EliteSeries WMS & TMS

TECSYS' EliteSeries Warehouse Management System (WMS) is an industrial-strength warehouse management solution that empowers companies to gain control over customer's service levels, throughput volume and order turnaround time, as well as warehousing costs and profitability. The EliteSeries Transportation Management System (TMS) optimizes the execution and visibility of outbound shipments with a fully integrated, multi-carrier, enterprise-wide, shipment processing solution. It provides centralized control and automated information distribution through Web-enabled technology and eliminates the costs and complexity of multi-site operations.
